EDUCATION

Purdue University

West Lafayette, IN

Bachelor of Science in Computer Science And Mathematics

May 2028

Leadership: Software Lead, Purdue IEEE ROV (Remotely Operated Vehicle) Team

EXPERIENCE

Software Engineering Intern

Jun 2026 – August 2026

Walmart

Sunnyvale, CA

- Incoming Software Engineering Intern at Walmart Global Tech

Software Engineering Intern

May 2025 – August 2025

Intel Corporation

San Diego, CA

- Reduced manual workload by 70% and cut runtime setup time by over 50% by automating GPU power estimation workflows using Python and the Jenkins API, integrating ZTDB/netlist data from 3+ external teams.
- Parsed over 20GB of emulation data from GPU architecture workloads (e.g., Cyberpunk 2077) to extract and categorize 8,000+ clockgate and register cells based on functionality clusters to create clock tree structure.
- 30% reduction in design review time by creating dynamic PowerBI pivot tables and visualizations to identify inefficient register and clockgate placements and architectural bottlenecks.
- Analyzed 10,000+ buffer and functional cells by through a robust TCL script to extract physical placement data, and other cell characteristics uncovering 3+ high-latency paths/placements caused by suboptimal clustering.

Software Engineering Intern

June 2023 – August 2024

ModalAI Inc.

San Diego, CA

- Increased test throughput by 500+ tests daily by optimizing the testing environment and CI/CD pipeline using Docker, Grafana, and Python scripts, enabling faster bug identification.
- Saved 4+ hours of manual work weekly by automating production tasks with Python scripts that generate XLS files for DHL and FedEx shipping orders.
- Handled 50% of the VOXL migration from LU1 to LU2.0 (Ubuntu 18 to 20) by using BitBake and C to set up GPIOs, enable wireless connectivity, and debug critical dependency errors.

Software Intern

June 2022 – August 2022

Shifting Orbits Foundation

Bangalore, India

- Organized and cleaned large datasets using Excel, CSV files, and SQL, improving data accuracy and usability for further analysis.
- Eliminated garbage data and conducted data analysis using Python and the Pandas library, leading to actionable insights and data-driven conclusions.
- Collaborated with software engineers to design and develop frontend web pages, enhancing user interface and experience while refining Python and web development skills.

PROJECTS

Bublur | PostgreSQL, Python, JavaScript, Google Cloud, Tailwind

August 2024 – December 2024

- Developed a full stack social media platform where users contribute to community posts by writing responses to randomly assigned topics, with each user's input being added to the original post.
- Built the backend using Flask and integrated PostgreSQL for database management to handle user data, posts, and interactions.

Investopedia Clone | Yahoo Finance API, Java, Javascript, RDS, Tailwind

January 2024 – April 2024

- Developed a website similar to Investopedia using Yahoo Finance API for real-time stock data, with a Spring backend and RDS storage.
- Trained an AI model using LSTM to predict stock prices with 75-80% accuracy, utilizing historical data from stocks such as MSFT (Microsoft) and AAPL (Apple).

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS, R, Bash, SystemVerilog, TCL

Frameworks: React, Node.js, Flask, Spring, Tailwind, Sails.js, FastAPI

Developer Tools: Git, Docker, Google Cloud Platform, VS Code, IntelliJ, AWS, Bit Bake, Firebase, PowerBI

Methodologies: Agile, Scrum, Test-Driven Development (TDD), CI/CD, Code Review Practices
